                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1, Application US/08158936
Patent No. 5521067
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Bone Marrow Cell Adhesion Molecules and
TITLE OF INVENTION: Process for Detecting Adherence Between Cell Adhesion
TITLE OF INVENTION: Molecules and Cells Generally
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS: 1
CORRESPONDENCE ADDRESS: 3
ADDRESSEE: Mixon, Hargrave, Devans & Doyle
STREET: Clinton Square, P.O. Box 1051
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/09025706
Patent No. 5558874
GENERAL INFORMATION:
APPLICANT: Clark, Richard A
APPLICANT: Gailing, Doris
APPLICANT: Gailit, James
TITLE OF INVENTION: EXCOMBINANT FIBRONECTIN-BASED
TITLE OF INVENTION: EXTRACELLULAR MATRIX FOR WOUND HEALING
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESSE: Jackel Fleischmann & Mugel, LLP
STREET: 39 State Street
        APPLICANT: ACCIVING, PETRUS W.
TITLE OF INVENTION: TARGETING ADENOVIRUS WITH USE OF TITLE OF INVENTION: CONSTRAINED PEPTIDE MOTIFS NUMBER OF SEQUENCES: 80
CORRESPONDENCE ADDRESS:
ADDRESSEE: Leydig, Voit & Mayer, Ltd.
STREET: Two Prudential Plaza - 49th Floor CITY: Chicago STATE: Illinois
COUNTY: USA

Sequence 2, Application US/08453378

Patent No. 561648

GENERAL INFORMATION:

APPLICANT: Salmi, Marko

APPLICANT: Salmi, Marko

APPLICANT: Jalkanen, Sirpa

TITLE OF INVENTION: Compositions And Diagnostic Methods

TITLE OF INVENTION: Using Monoclonal Antibodies Against CD44v6

NUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:

ADDRESSES: Sterne, Kessler, Goldstein & Fox

STRET: 1100 New York Avenue Suite 600

CITY: Washington

STRET: 1100 New York Avenue Suite 600
